

Quality Improvement Science & Plan-Do-Study-Act Cycles

The foundation of the Early Childhood Comprehensive Systems (ECCS) Impact project is rooted in Quality Improvement Science. The Quality Improvement Science model generates small tests of change in real world work settings through Plan-Do-Study-Act Cycles, referred to as PDSA Cycles for short. Both the Nassau County and Western NY placed-based communities will be conducting PDSA Cycles in their communities throughout this project in an effort to promote systems change.

Model for Improvement

Goals/Aim Statement

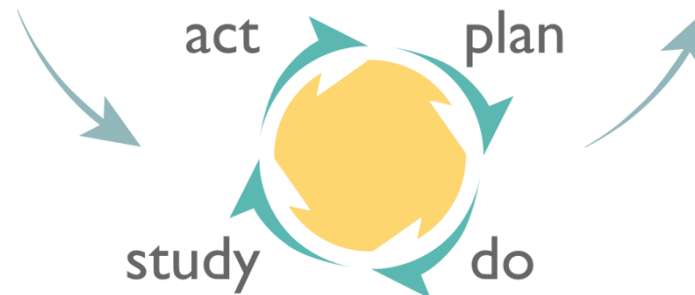

What are we trying to accomplish?

Measures and Feedback

How will we know that a change is an improvement?

Changes

What change can we make that will result in improvement?
